Group #4
Generative AI: IT-372-DL1
Jan 25, 2026
Hussna Azamy
Wiam Salih & Ali Channan

**Step 1:**

1.

| | |
|---|---|
| Audience (who it's for) | Busy college students who want fast healthy meals |
| Problem (what pain point is the topic solving or what desire it is fulfilling) | Students struggle to eat healthy meals on a budget and don't have time to cook |
| Outcome (what changes for them) | This helps students save money, eat healthier, and spend less time cooking |
| Constraints (time, budget, skill level, environment) | Limited budget, limited cooking skills or cooking equipment, 2-3 hour max prep time in the kitchen |

2. Learn to cook budget-friendly healthy meals right in your dorm. Save time, no cooking skills or expensive equipment needed.
3. College meal prep, Budget cooking, Student friendly recipes.

**Step 2:**

**Overview:** From the overview video we learned that becoming effective with AI in 2026 is less about mastering one specific tool, and more about building practical and repeatable workflows through hands-on use with a variety of tools. The video emphasized learning by doing a series of small, achievable projects that expose you to the core things AI is capable of like research, data analysis, visual reasoning, and automation. What stood out most was the focus on producing real results rather than just learning theory, since that helps build the knowledge around when and how different AI models and platforms are most useful for specific scenarios. The video made it clear that consistent experimentation and intentional system building with the tolls are what lead to AI fluency rather than just one of uses of chatbots.

**Step 3:**

**Features:**

- The gallery had a showcase of interesting projects that have been completed, it gave me insight as to how AI tools are being used to build and complete projects.
- Another feature that was helpful was the tools recommendation, I found tools that are very helpful and reduce a lot of time when building certain projects.
- The prompt templates will be a great source to use as well.

**Step 4:**

| **Tools** | **Wiam's Screenshot** | **Ali's Screenshot** |
|---|---|---|

| | | |
|---|---|---|
| Google AI Studio |   |   |
| Loveable |   |   |
| Replit |   |   |
